CF ROKA COPPER AND ALUMINUM TAPPING OIL

Description:

High copper and aluminum tapping oils are liquids with high viscosity and extreme pressure additives. It is suitable for all kinds of holes, clicks, tapping, drilling and other metal cutting processes. High copper and aluminum tapping oils can be used in all non-ferrous metals, copper alloys, magnesium alloys and other electroplating metals. This product reduces friction significantly, extreme pressure lubrication function is good.

Performance characteristics :

- Prolonging the life of the tool.
- Increase the finish of the workpiece
- Increase the cutting rate
- Reducing production costs.

Products Code	Packings	Capacity
I100149-4L	Can	4L
I100149-18L	Pail	18L
I100149-200L	Durm	200L

Typical Physical Properties:

Appearance	Light Yellow viscous liquid
Specific gravity 20°C G/ML	0.85~0.88
Flash point °C	>200
Viscosity cst40°C	350~450
Anti-mist properties Corrosion inhibitor	Good

Matters needing attention:

1. Pay attention to sealing and preserving oil products
