TECHNICAL DATA SHEET

RUSTKING S5 **(Rust preventire for motor and rotor core)**

Brief introduction:

FUKKOL RUSTKING S5 It is a high-performance antirust agent made by the most advanced technology at present. It has the function of removing water, and it does not contain secondary amine and heavy metal, so that the discharged water can be treated safely, and the unique antirust extremely thin can greatly improve the coverage performance. The product has the advantages of quality, reduction of loss, increase of coverage and so on, which can improve the economic benefits. It can be used for coating and spraying.

Purpose:

The high motor core anti rust oil S5 is a high quality rust proof medium which can be used for motor core and motor core. The use of this product after the iron core processing can effectively ensure the anti rust protection before the waiting for processing, the unique insulation paint solubility, ensure that the insulation paint will not affect its performance by antirust oil. The problem of coating thickness and cost is solved.

Advantage:

- No gasification solvent, so it meets the requirements of environmental protection.
- Unpleasant smell, applicable to general workshops;
- Produce special protective film to prevent rust on the metal surface, and the indoor antirust period can last up to 2 years.
- Do not affect motor, insulating paint processing;

High efficiency insulation

CHARACTERISTICS

An unvolatile component%,	Not greater than 23
Tilm Type	Thin oil
film	
Film Thickness (Micron)	8
Drying Time (Mins) @20°C	140
Covering area of impregnated (square meter / liter),	38
Indoor Protection	18-24
months	
Covered Outdoor Protection	Not recommended for
use	

Matters needing attention:
