TECHNICAL DATA SHEET

A400F ALUMINUM DROSSING FLUX

Brief introduction:

Aluminum alloy slag powder is a kind of aluminum die-casting slag with crystal powder, which can effectively reduce the loss, prolong the life of the crucible and refractory layer. At the same time, it can reduce the formation of alumina slag and the special low smoke flavour formula, which can effectively ensure the safety of the operation.

Recommended dosage: aluminum alloy slag powder of 0.5~1.0 kg is used for every 100 kilograms of metal solution.

Matters needing attention:

1. Pay attention to the sealing and preservation
